Back End Developer

Consider being Brandography's next **Wordpress Back End Developer** working with our all-star team of life-long learners in a (remote-friendly) culture that safe-guards against mundane work.

Here's the scoop!

- Brandography is growing! We're looking for a backend developer skilled in WordPress and app development for a diverse and interesting client group.
- Focusing on back-end development, critical skills include expertise with PHP, .NET, HTML, CSS, JavaScript, Java, ASP, and Responsive Design.
- Back-end development work on the server-side encompasses changes and updates to databases and servers and work on features like structure, security, and content management.
- Writing effective APIs and building features/applications with mobile responsive design.
- Troubleshooting and testing software to ensure responsiveness and efficiency and writing technical documentation.

About us!

- Brandography is expanding as a digital solutions firm and our team members are continuously growing in their craft as well.
- Our work culture fosters trust, autonomy, collaboration, integrity, and growth.

Enough about us, how about you?
- Are you able to create architecture plans for projects, explore options and variations to best create solutions?
- Want to hang with fun, kind, and supportive teammates that are "nerds to the core"?
- Do you think servant leadership is super cool and want to work with leaders who serve the team?
- Interested in development projects spanning from Wordpress builds, apps, and functionality that drives our client's business processes? (Added bonus! We have in-house design/UX resources to team with.)

Candidate Qualifications:

- Degree in computer science, technical education, or work experience equivalent.
- Accomplished expertise with Wordpress. Magento and Shopify expertise is a plus.
- Proven experience as a Back End Developer developing for both desktop and mobile.
- Knowledge of multiple front-end and back-end languages and libraries (e.g. HTML/ CSS, JavaScript, XML, jQuery, C#, Java, Python) as well as Laravel and JavaScript frameworks.
- Familiar with databases (e.g. MySQL, MongoDB), web servers (e.g. Apache), UI/UX design.
- Excellent communication and teamwork skills.
