

Job Description

Nerd Immunity:

Be Brandography's next **Full Stack Software Developer** and reap the benefits of nerd immunity as you work with a kick-ass team of life-long learners in a (remote-friendly) culture that safe-guards against a mundane work experience.

If you'd like to C# if you're interested, ;) consider this software engineering opportunity to produce software solutions for a diverse client group. Brandography is rapidly growing as a digital solutions firm and our team members are continuously growing in their craft as well. Projects run from Wordpress builds to web applications that drive our client's business processes.

Along with the proud owner of a vintage Star Wars tee shirt, are you...

- Able to help define and build Brandography's engineering culture?
- A developer who wants interesting and purposeful projects?
- Familiar with "The IT Crowd"?
- Interested in challenging and advancing your skills?
- Seeking a work culture that fosters trust, autonomy, collaboration, integrity, and growth?

Do you share a tenacious vengeance against bugs with your exterminator and are you looking for...

- Projects that you can hit out of the park? (Sports metaphor, FYI)
- The chance to utilize your vision and experience to help serve lesser mortals?
- Kind and supportive teammates that are "nerds to the core"?
- Opportunities for leadership, education, and advancement?
- Leaders who serve the team?

For this remote-friendly Full Stack Developer position, you should be comfortable with both front-end and back-end coding languages, development frameworks, and third-party libraries. (Really, we need to say this?) You will have full responsibility for both solo and lead development roles of projects, add-ons, and troubleshooting issues with software.

Responsibilities Include:

- Nerding out with our development team to ideate software solutions.

- Creating architecture plans for projects, exploring options and variations to best create solutions.
- Building the front-end of applications through appealing visual design. (We have in house design/UX resources to team with)
- Developing and managing well-functioning databases and applications.
- Writing effective APIs.
- Testing software to ensure responsiveness and efficiency.
- Troubleshooting, debugging, and upgrading software.
- Creating security and data protection settings.
- Building features and applications with a mobile responsive design.
- Writing technical documentation.
- Working with data specialists and analysts to improve software.

Candidate Qualifications:

- Degree in computer science, technical education, or work experience equivalent.
- Accomplished expertise with Wordpress (primary) and Magento (secondary). Shopify expertise is a plus.
- Proven experience as a Full Stack Developer or similar role.
- Experience developing for both desktop and mobile.
- Knowledge of multiple front-end and back-end languages and libraries (e.g. HTML/ CSS, JavaScript, XML, jQuery, C#, Java, Python) as well as Laravel and JavaScript frameworks.
- Familiarity with databases (e.g. MySQL, MongoDB), web servers (e.g. Apache) and UI/UX design.
- Excellent communication and teamwork skills.
